Hardware

The British microcomputer industry is back from last year's Chris Curtis Award-winning designs.

At a press conference Mr Curtis said the sales of the BBC computer over Christmas were at the 100,000 level and a similar number of Decosys were sold.

Chris' figures are double those of last year and show that Acorn will over-sell its many machines in 1988, compared with 1987.

The conference was called to update journalists since the company has a much 'A's' product, we were disappointed.

Concerned see page 2

Software

It's a surprise that the latest Macintosh is still the most popular of the BBC computers.

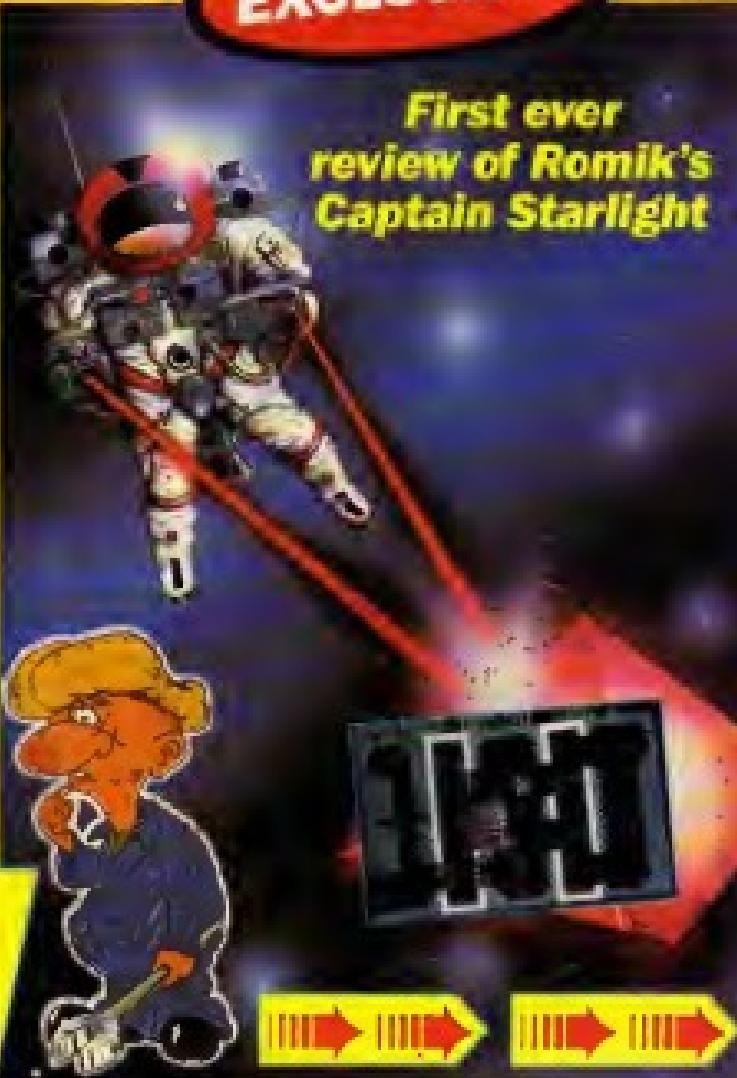

It can be replaced by the Spectrum Plus which has been updated by BBC. The Plus model will now sell for just £129.95 (not including VAT) for £139.95. Obviously the Plus won't be as versatile, but you will have the plus of graphics for £14.95.

The difference between the Spectrum + and the keyboard A makes a complete newcomer to BBC computing a good buy. The Spectrum with a colour monitor can be had for £149.95.

The Plus has a full keyboard (programmable keys).

SURVIVOR

AMSTRAD

REVENGE. Search the haunted rooms of Bloodstone Abbey for the up-to-date treasure left from years gone by. However you must help Angus around the castle, including because of the evil spirits who will chase Angus wherever he goes. And he has to defend himself in his trusty gun and powerful bombs. Luckily for Angus there are various objects lying around the Abbey such as antiseptics, money bags and bottles of life giving elixir. There are 1000 various rooms all presented in remarkably clear and colourful graphics with beautifully smooth scrolling screens. What lies a terrifying challenge for Angus and lie up to you to help him. Are you the survivor?

AMSTRAD SP80

HOUSE OF DUNER. Enter the House of Duner as your controller, as you may never leave again. However once inside there is a choice of nine rooms to select. Walked each door in a totally different action packed scroll game, each of which are certain to stretch your nerves to the limit. If you manage to get through these nine rooms another two more rooms (3 and 4) will appear, but beware the evil powers of the House of Duner.

AMSTRAD SP80

FLIGHT PATH. Flight Path is without doubt the best flight simulator on the C/1P and Amstrad. The many different features include Altimeter, Flaps, directional headings, compass indicator, ground training lights and reverse thrust to name but a few. Also included are smooth graphics as you take off, cruise, turn, descend, and land once again.

AMSTRAD SP80

OUTPOST THREE. As colonists invictate the planet, Continuum's your quest looks of major rated mission. The start of you needly sing full of the latest onboard computers and extra powerful engines. Also included are full 3D graphics, to add a noticeable realism to this futuristic journey through time itself and beyond.

AMSTRAD SP80

ROBO ROBOT. You must skillfully manoeuvre your jumping patrol vehicle over dangerous mine fields as well as large boulders and extremely placed mines. Not only this but avoid the freezing alien spores as it bombards you from above.

48K Spectrum dead

From *Chris Carr*

in the style of the Sinclair QL. This has been roundly criticised for its lack of feel and the peculiar taste of the keys. It would appear that in the future users will have little choice in terms of keyboard style.

If you're looking for a good keyboard you may be able to find the BBC model on the market at a good discount. Sinclair has agreed to recognise a price for the machine and some London dealers are offering them at under £1000. Owners are also price could fall even lower.

Those who want to add the Plus keyboard to their BBC models can now do so, as Sinclair is offering an upgrade kit. If you had computing should be a do-it-yourself hobby, you can purchase the kit for £20. Those with more serious interest should send their computers to Sinclair and will be charged £30.

Sinclair Research, Sunbridge Road, Canterbury, Kent.

Acorn squashes rumours

From *Chris Carr*

Recent news of the Electron which was 25% less than we had predicted", Mr. Carr admitted. "We are still aiming at a very high level and our models are correct."

At the same time he announced a range of price cuts and incentives. The Electron has been slashed by £100 to £125, making it a direct competitor with the Spectrum Plus. The model had been popular since the Electron was launched and incentive measures will be much more attractive for users at home and in education.

There is also to be a trade-in scheme on the BBC micro. Any user taking up one of computer leases on Acorn dealers will be able to claim £20 off the price of a new BBC. Chris Carr announced there will be no recommended retail price on the machines so this offer can be delivered from the best price the user can find.

BBC machines have been selling at low as £399 so this could mean you can already buy a BBC for less than £600 if you have a computer to trade

Price started at £329.95

against what Acorn would be doing with all the hardware. Chris Carr suggested they make it easier to sell them at a profit, otherwise they were looking for a large hole.

Schools are also to benefit from Acorn's initiative. The Acorn Maths in Schools Scheme will continue when the BBC Maths in Schools scheme is off. Under this new incentive schools will be able to get Acorn maths software and its special parts. A number of data packages will be based on the Electron and this will be more attractive when Electron is released.

Despite all the updating of software, rumour has it Carr would not give any details about the new improved BBC. He confirmed no redesign, but claimed to give more clues on design. Acorn managers will have £1M of user funds with special bonuses £50K to help with the various software requirements in any model. This would bring the BBC to just under £1000 as far as costs of the more modest machines.

Mr. Carr was keen to emphasise Acorn's policy of software compatibility. "Our units are very sound in that respect," he claimed. With over 200,000 Acorn computers currently being used, this will be of great appeal to BBC owners and, especially, to schools, of which some 30 per cent have BBC machines.

Acorn, Cherry Hinton, Cambridge.

Apologetics

Calling all winners of the *Pelican* and *Warwick* competitions

Due to an unfortunate administrative error the prizes for these competitions have been dispatched to the wrong addresses.

If you were a winner at either of these competitions, please write to us, giving your name and address and software which has been won, giving full details of your name and address so that we can send you the correct prize.

We apologise to readers, Pelican and Warwick, for any inconvenience caused.

Titanic dream

Titanic's Dream is a new software house, based in Bristol. It's first release is a challenging memory testing for the BBC. The company specialises in games for both the BBC and Spectrum.

Titles cost £10 and £12 on cassette and disc respectively.

Titanic's Dream, Backhouse Close, SE3 Sydenham Rd, Bristol BS8 5BY

Hard nut to crack

Tower of Babel, from Games Workshop, is apparently running just that in the software department. It has been finding a hard nut to crack, and subsequently pressing Russell Clarke and Mike McElroy for help.

To ease themselves, and of course Tower players, more hours of explanations and advice, the disc has been re-written.

a home tutor. This is available free, with an SAE, from Mail Order Dept, Games Workshop, 2933a Gloucester Rd, London NW10.

The Key of Hope, as this the manual is known, will be released by Games Workshop in March. It's the follow-up to *Tower of Babel*.

Raid on MSX

Two popular games by Amstrad have been converted to run on MSX computers. *Pelican* II (Amstrad) Peter Harry and his relatives (available in March) and *Warwick* (Amstrad) David, Linda, Stephen, Steve and Jonny try to prevent you destroying the supply bridges on the river.

These are Amstrad's first MSX titles and they both cost £15.95.

Amstrad, 107 Finsbury Rd, Middlesbrough, North 7LG 1EP.

Combat, Korn and crime

Interplay Maths has released three new games, two for the C64 and one for the VIC-20.

The *Commandos* game is from Lure and Rogers of Korn. Once placed you at the controls of the Giga Tank, Interplay, which has exceptionally strong armour plating and self-repair capabilities. You must search captured supply depots, defend key targets and land helicopters.

Kings of Korn is the sequel

COMPETITION

Have dinner at Wally's and take home a bag of Mikro-Gen goodies. There are 47 prizes in all.

THIS WEEK we've joined forces with Mikro-Gen to bring you an entirely new type of competition. If you own a Spectrum, C64 or Amstrad CPC464 then you

Design a Wally

could win a fantastic prize from Mikro-Gen.

Wally is preparing to open his newest game store which will have you glued to your screen for hours. He's called it "Wally's" and will sell CPC64s. You could be the

first person to join him by his laptop.

But what you will need is a bit of artistic talent, plenty of imagination and a really good sense of humour. Do you qualify?

We want you to design a badge or sticker featuring the new Mikro-Gen Wally. It should be in a simple style so that most children can draw it. But it does not necessarily have to be art, with plenty of space to let anything else go on it. Send it along with Wally's logo and a short explanation of what it means. Drawings will be judged by Mikro-Gen and a panel of judges and maximum marks will be taken into account.

The first prize in the competition will be a copy of the new Mikro-Gen Wally game — "Autocross" — plus a selection of other Mikro-Gen titles and a copy of Fremont's "Wally and the Pirates" and also a compilation prize of Wally's best games.

Please send your entries now for a chance to win. The winning entries will be chosen by Mikro-Gen for publication in *Computer Games*. To get all your friends involved and enter, there are 47 prizes waiting to be claimed.

How to enter

Design a Wally character. Mikro-Gen's Wally West. It can be a drawing of his face or all of him. And he can be dressed as a cowboy or anything else. But make sure it's a sensible creation of you like. Drawings will be judged according

to novelty, design and imagination. First place is an Amstrad CPC64 and this will be Mikro-Gen's prize. Second or third place is a choice which is equally important if you are under 16, you must be accompanied by an adult. Mikro-Gen will present the first prize winner with the first ever copy of Fremont's "Wally", as well as a selection of Mikro-Gen games and a "Wally" T-shirt.

The second prize goes to the next Wally T-shirt and Fremont's "Wally". Third place will be judged by Mikro-Gen and a choice of Wally's books.

Drawings cannot be returned. The winning entries may be exhibited by Mikro-Gen for exhibition or display of products.

Full page designs will receive no preference. Post your entry to Mikro-Gen Competition, Home Computing Weekly, No 1 London Square, London EC1V 9AP. Entries close on December 10, 1986.

You may make as many entries as you wish but each entry must be accompanied by an offical coupon and a stamp — and sealed in a separate envelope.

If you are a minor, the coupon will be used as a bond and your parent or guardian will be responsible

The rules

Drawings will not be accepted from members of Staff, Editors, Production, Advertising and Publishing from *Computer Games*. This competition also excludes employees' families and agents of the magazine.

The Home Office does not accept post of the rules.

1984

Hi-score

In the first of a series, one of our regular BBC reviewers gives the thumbs up and thumbs down to the most memorable Beeb games of 1984

Best adventure

On the adventure front the nomination goes to *Melville's Spectre*. The Hobbit was a breakthrough, despite the lack of graphics. I have others before it, regarding adventure, than a word is worth a thousand pictures.

The attempt to enter comments at complete English sentences, and the interaction between characters, sure! The justify the rating of best adventure and also confirm my suspicion that *Thieves*, the game about gold, was a wally.

Best strategy program

There are many, like and cause board style programs available for the BBC. However, what you are in the middle of producing is masterpiece of programming, the best thing you can do is copy and beat a silly program. For this reason I decided that the reason of this category should be a BBC. So when *Robot* I was forced to download some of the emotions this represented ROMs as there are of limited use to a large proportion of Beeb owners.

As an excellent example of a BBC game, *Robot*'s writer ROM I chose *Robot's Toolkit* ROM. Other ROMs you can almost ignore, but *Toolkit* receives an acknowledgement in clearly that it was on style.

Best space game

Now down to the many games. Here is a game which can be rated upon to wet the man from the logo. Programmed by Celsus, who writes as to write first, we have *Andromeda's Zalaya*.

Zalaya is born of the old school of arcade games, with wire alien rats of alien species roaming the sky in galactic fashion. Apart from the excellent graphics the appeal lies in the fact that once you've played the game for several days you won't get past the fourth screen. These bad guys are mean!

Best graphics

Dragon, as most readers know, is one of the most complex, deepest scrolling, 3D, objects or games of all time. I was so overcome with excitement when I first saw Paul's *Forrest* on the Beeb that I went out and bought a copy. This is almost standard of among difficult reviews.

The only thing *Forrest* lacks is the abundant colour of the original, but this was a small price to pay for such a game.

Coolest program

Punk was a difficult game to place. I would have liked to give it the best graphics award, but for that by placing it in the *Cool* class I could give recognition after a whilst.

Cool seemed a nearly miss up category for *Punk*, as it summed up the whole appeal of the game. Here was an opportunity to have up your hair, change, red t-shirt, locate the guitar, locate the guitar hero. I enjoyed *Punk* quite a bit, but I will never be

a fan of the first computer games to be the most colour

Huk is that accurate software available weapon, but which one, because the discontinued hand held books are not for review? A second rate game, sold with first class advertising.

Very best program

The winner of this category isn't much of game as a way of life. I rarely play a game now. I've moved to *For Assassin's* Elm I made an exception, an exception which I have had for the past two months. I don't know whether it is the shared writing and drawing, the drill of the gun training, or the sheer pleasure race of single handedly annihilating the great hordes. I enjoyed *My Passage* using a *Dandy*, but I will never be

surprised until I join the ranks of the Elite. The game is pure enjoyment.

One game of the year. What game can lay claim to be like. Take one look at any of the computer selling agents, they're covered with this book, tape, and cassette.

My personal award

As with many other categories, this too could have been won by *Huk*. However, I decided to give my personal award to a more lively program, *Post from Dynasty*. I've played numerous pool and snooker programs on the Beeb. Most have had complete sets at half and wonderful colours, but as games they have failed *Dynasty's* Post in different. The graphics are simple, but the funniness of the game are a delight. I have spent many a happy evening with friends general chatted on *Post*.

I always feel that the new Beeb cannot hold any more surprise for the Beeb. Each year I have been writing here to another 12 months of entertainment in 1985.

Worst program

Microspace is currently one of the leading producers of top-grade games for the BBC. However, as the year draws wanes, so does. One ridiculous program was a game called *Bottom*. To tell a bad was a coincidence. The game was a one-episode space action game involving *Space Invaders*. A cloud of live invasion ships moved from side to side, so that them down and they were replaced by another cloud of mysterious monstrosities. Reversing can be necessary at times!

Worst game

One recent release is a prime candidate for this category. The *Civ* (dead from *Police Software*)

Alien CB4 + Joystick £8.95

Head Games, 222 Kings Rd., London SW1 7SH.

This is the game of the day. You take command of the crew of the Alienship as they try to get the ship off the planet. It is a combination of the two and can be just as exciting.

The controls are up, left and right hand and the program has presented with mostly numbers again. You choose between the full adventure or a shortened version.

The object of the game is to get the ship off the planet and go back to Earth with as many of your crew as possible. You have a map of the ship and various sections to move you. This will tell where you are and the state of

play of the crew.

At first I was disappointed at what it looked like when our screens first arrived, but after playing several times I can say that this game gives me joy. The sound effects add to the suspense as does the sudden arrival of the alien.

value for money

Impossible Mission CBM 64 £8.95

CBS, Atticsoft Inc., 241 Bathstone Pl., London W1.

This is one of the most addictive games I have seen in recent months.

Your mission is Agent 484 to save the world from the alien invasion, who has invaded our world with nuclear destruction. You must find the security code hidden in the terminal and crack the control room while evading the aliens which guard the secret weapon laboratory.

An added suggestion is that the weapons menu is in the form of gun and missile punch cards. They have to be fitted together in a given plan of the password you require. You do have a pocket computer to help you.

The graphics in this game are very good, the space scenes being replicas of the planets in "Star Trek". Every planet is different, the colour schemes always change, as does the behaviour of the robots. And for those added bonus there is a surprising twist during the action. As far as I know it's about the only game I've played that's a side-on adventure game. May be it's an impossible mission - or maybe I need to play again?

Roland Ahoy Amstrad CP6664 £8.95

Amstrad, 149 Kings Rd., Brixton, London SW1 7SH.

If you want a game with a challenge as well as a good game, then well recommended because Roland Ahoy is the game for here it is a puzzle, making the average user sit hours of pleasure.

This is a management game which involves stock holding and transport choices. If I had the technical knowledge I would say it's extremely good and that the graphics which are part of the game are the best in a game, but as both are average at best you can change it.

There are four levels, the first is the easy level which

you must clear to get underway. Playing is difficult as a screen is held to you as soon as you step off the ship.

When you get the ship you play your way through the different levels to the treasure, avoiding pirates, enemies. Finally you reach the treasure on the island, avoiding spiders and snakes.

In all, an interesting and rather slow game which could do with a little more speed and colour.

Suicide Strike CBM 64 £7.95

Systems 3, South Park Rd., Black Prince Rd., London SE11.

Are you going to be a jet pilot? In Suicide Strike you can be. As Standard Leader you command planes flying through wave after wave of enemy forces on a one way bombing mission that uses the laws of physics to victory.

The screen displays a cockpit with the joystick below showing the status of a cockpit and the nose through the cockpit window, yet the new feature of the cockpit of the plane, you can actually fly. Flying, however, takes some getting used to. The screen is 2D. Your plane and the enemies 3D. You're forced to fly the ground and out of the canopy is however too high to fly for a normal user. So, if you're not used to flying, it's better to leave the helmet on.

You're flying with a limited fuel supply and a limited cockpit, so you're forced to constantly refuel and reposition. You cannot land as you will hit and might, so with constant fuel you can make your rocket disappear around the corner to attack the enemies.

Suicide Strike is a more realistic simulation and Standard Leader, so you can get a lot more satisfaction quickly.

Weird and wonderful

**There's a real mixture of games, if you like variety.
Alien intruders or action in the air**

Juice! CBM 64 £7.95

Systems 3, South Park Rd., Black Prince Rd., London SE11.

Juice! is really based on juice idea, being one of the first games featuring no squares or boxes, but a colour graphic display, that has been designed differently to make it look really different. The blocks have been replaced by the coloured juice, plus juice, juice, juice and juice characters.

Just like an electronic chess, this character has to complete a move from one corner to the other. You can do this in a number of different ways, plus you have the juice drink. This will also help you work in the

juice shop, and prepare an orange juice for the customer in a while.

Every now and again, the computer player reaches a bottle with no juice, then you have to complete the juice because the computer person makes a juice bottle rather than changes every square.

I personally had trouble keeping my character under control, but overall this is a nice variation on the theme and I enjoyed it.

AMSTRAD PROGRAMMING SERIES

In the second of our regular series on Amstrad programming, David Ellis shows you how to set up the RSX and get it working

Last week's article explained what an RSS feed is and how one can be set up. This week we will look at our own RSS feed and get it up and running.

The ECR will run at 400°C (194°C), giving an around 10% reduction in time depending upon whether the STIMSON AFTER command is used. This command also changes the character from RUM into RBD — the lowest priority position after SYMBOLS. AFTER 40 will run at 400°C (194°C), giving an around 10% reduction in time. The last keypoint covered by the Kurnil Test sequence will be at 410°C (204°C) to 410°F (199°C). The machine will remain quiet given in Table 1 will result in an A/2000 number to A/2000 (2000). The

Table 1. Mortality risk scores for men and women.

Address	Memory	Op Code	Op	REG	Comment
AT0000	40 HC	A700A	SI BA	203	new address of ROM, with base from buffer for memory
AT0000	40 HL	A701A	LI PL	7C	old AL LOC F000 —
AT0000	CALL ROM	C9 01 BC	CALL	BC	get address of ROM in the Registers
AT0000	RET	C9	RET		return from subroutine

RSS message table will then begin at the next byte — 010000 (20000).

supplementary where more complex issues are addressed

Time taken to switch

As a general practice with Zeta messages and the Latin Spiritualists' Union (LSU) of the address will come first, followed by the Name, Surname, Initials. Address can be given as Room No., Street, Post Code.

Insight on the Amstrad **CPC464**

The main address of the Word Title is located AT1 AT0 AT/ AT. (52700-52800). As new words are added their locations will be automatically updated so that the BASIC program is having 2 bytes where to store the word names.

The machine code routines for the switch will reside in address 10420 and free 10500. POKE the address to 10420, 10500, 10420, 10500, 10420, etc. and also be replaced by the BASIC program to clear the machine code regions.

placed in the correct position. Finally, the R&D Function addresses articulation (linking) with the place in the R&D Command Table where the first RMP will take place. These lessons will also be

program. The word length should be less than 17 characters. No checks are performed for illegal characters, so be careful! This part of the program also places the IBM characters and the address of the machine code position for the word to the IBM Command Table. Various pointers are also updated.

The second part of the program will tell you where the machine code routine will reside in memory, and then PEEK the numbers you enter in the address window. All the whole of the ROM, complete with patterns, at a memory location with the name "NEW WORDS" for whatever reason you can. The length of the file is calculated by automatically

AMSTRAD PROGRAMMING SERIES

AT&T from the address of the
local machine code number. If
you have any questions about
expenses when working in
another country then ask that it
is posted in a column in the local
program, and then load at the
library file "NEW WORDS".
You can then compute from
what you will add all of the
expenses not contained in the
list, compare with the R&R
Estimated Table, Work Table,
and the Machine Code Number
for the week. If you are in
a really bad type, I may try to
modify the program so that
you can check what you have
calculated and current pay
expenses.

Now if you RUN the BASIC program we will enter the file name and then the word PARAMETRIC when prompted and then the following ten values, each number one at a time:

DO 36 6 DO 66 3
DO 46 4 DO 96 2
DO 56 2 DO 106 1
DO 86 1

Remember to press the Return key after entering each of the members. When you have

joined all the members over 50 to aid the progress. Now that our age is passing the 50 mark, PARAMETER and the Return by Us have come along," should appear. "Why?" says the R&B band and get back "Married" to the listeners. The short-winded code program residing at 42000 needs to be run first for success.

CALL 8700

Now the **POKE** should be simulated, and if you enter this **LOAD PARAMETER** the tape now should revert to BASIC without any "Unknown command" message. If so then the program has found the word **PAS-AMETER** and ran the machine code routine for it. Perhaps it doesn't appear to have done anything, but as we shall see next week it is actually a very useful word — be sure to use it from BASIC.

If you have suffered any
strains or unexpected results,
then I suggest that you check all
your frames very carefully. The
struts do wear when working
at altitude and they need to be
checked.

Astro Attack Amstrad CPC64 £9.95

Romik, 109 Kings Rd., Brookwood, Surrey GU14 0EF

More often than not it's hard to find software with a sense of humour, so it's a relief that it's a space-themed game game with one containing a punny catchphrase which has been translated into another tongue.

The action of the game is best described as follows: players control their own ship. You must fire at your life or the game goes and you have to repeat the earlier levels for the initial score. A lot of the game is made more exciting by the puns, and the more I played, the less impressed I became. The graphics are good and there are a number of surprising weapons such as the spacey raygun.

In general not much else can be said.

The physics isn't very pleasant either, which makes the tasks harder than a night under the stars. The movement controls are more positive, but they could have been used as better projectiles. Overall, a game for the light of heart who like to complete their after school pick-up sessions. D.C.

Backpackers' Guide to the Universe Part 1 48K Spectrum £7.50

Romik, Farnham, Surrey GU10 4JG

This game is a rather odd mixture that can provide a while of fun in some of the most bizarre areas of the universe — a dimly lit room with strange furniture and unusual lighting — which demands precision, with good graphics and exciting text. Once you have started this and absorbed the unique ideas behind each creature you can go on to the game indefinitely.

There are several Zorgs to be fought, backtracking to be explored, the series of code to be typed. There's collecting the crystals he will need to help him to progress through the various rooms, from pulling the Gobblin Plug to the universe.

Many of the passages contain objects which Zorg can collect and use to move here, making good use of these requires considerable ingenuity. The universe is divided by ring worlds, which are Zorg's strength, as when they are destroyed by his space-droid. There's a time limit within which the destruction of the mobiles must be completed.

This space game through the zones is quite fast, but playing the game seriously will require a lot of time and dedication. 84.50

Starlight exclusive

Here's a whole selection of space games including the first review of Romik's new release Captain Starlight

Captain Starlight CBM 64 £8.95

Romik, 109 Argyle Ave., Brookwood GU14 0EF

This is one hot game with a definite twist, but I say so! The first feature, perfect judgement and timing of need. Lesser mortals can play 80%.

In Captain Starlight, complete with jet pack, you shoot your way through the mass of the enemy's underground fortress and find and destroy its command centre. Apart from keeping clear of the colour walls, there are space mines lurking around, and power-ups after being hit out of your lifebar.

The action flows from left to right and back, but each time you enter a planet there's a power-up day, so it's no good trying to find a set route. Even having

Tachyon Command 48K Spectrum £6.95

Creativity, Farnham, Surrey GU14 0EF

It seems that you are at the year 2014, in command of a spaceship in the far future equipped with the Tachyon warp drive. That is great if you're a direct space trainee.

Although the way above was discovered, how could we hope to make an enough assistance, but

leaves from us now. The AI is terrible, that's right on the screen didn't get anywhere, they only moved, up, down, to the left or to the right. Although they started to move and go up, but when they did, it was very slow.

In other places, where I have used the tachyon, in fact you get

a simulation of a very fast movement impossible place with them. This is the sort of thing that we have been told to believe happens that fiction very often.

The claim on the cover used to say that this game was written by "one of Britain's most acclaimed science writers". Published by whom? 84.50

Warlords 48K Spectrum £6.95

Creativity, Farnham, Surrey GU14 0EF

The sales card says that the player in this game takes place on the planet Warlos. It has to be said that it's a bit of a stretch to imagine which planet that might be, or even where.

You never actually speak of Warlos in a verbal speech, but it's also apparent to all a fighting surface location of 20 planets. I tested the game against three because the others were easily inhibited when the attack began there. Because the opposition is limited to four, two players are required, and the graphics are simple, just black and white.

Unfortunately the response is not too positive when you start going left or right. However, after the first few turns of Warlos, the opponents, and themselves, are never seen over Warlos until off the top. This could become disconcerting should you happen to want to play the game.

According to the sales card, I should find the game exciting to play, against my friends in the home. The problem is to be used with two players. The same game was sold many months ago, and it wasn't very successful then. 84.50

PROGRAM

Unit 3

PROGRAM

WIC-20 + ИК РВОСВАМ

You must all have been frustrated by the speed (or rather, lack of speed) of Oric BASIC. You might have tried your hand at some compiled high level languages, such as FORTH (the only compiled high level language you can buy for the Oric), but even this isn't fast enough for your more multi-dimensional programs. The obvious step is to program in machine code, but how?

You can try writing the source code on a piece of paper, looking up the op-codes for each instruction, calculating the relative jumps and then enter the hex data with a simple memory editor, but this doesn't get you very far and is certainly very time consuming. You really need an assembler to save both time and space.

A good assembler should allow you to create machine code programs as a (fully intelligible) form using assembly, labels, pseudo operators, macros and include all the doshing work of actually entering the machine code yourself.

However, that doesn't mean a basic assembler like some macro. This means that you have to buy an assembler on tape and load it in before you start to program. Luckily there are a number of assemblers on the market specifically for the Oric/Acorn box. For some reason, they are not widely advertised and aren't often reviewed either. This makes choosing a suitable assembler very difficult. In this article, I have looked at four popular assemblers. Usually, the number of different features aimed at the assembler user than the CPU itself, representation facilities and general user friendliness separate the good assemblers from the rest, so I have concentrated on these points.

Assembler by Software Solutions takes up memory from 64K to 128K. The source code is stored in the form of a BASIC program with line numbers, the first of which must be "CALLER". I found no trouble defining a simple data routine and making it work. The actual assembly process is very quick with reasonable information over messages when the assembler encounters one. Most of the standard assembler directives are there.

You are given the choice of whether a listing of the object code is given by the assembler in the form of OPT, EQU etc or just a value in a field. EQU allows you to reserve a

Close-up on Oric assemblers and monitors

Shingo Sugiura has been looking at Oric / Atmos assemblers. His results and conclusions are laid out for you to study. Look closely — you may get some surprises

specified number of bytes of memory, DEFT's allows you to assign eight bit values in memory. A good feature is that the number of parameters don't define and the expression doesn't have to be of one type, as decimal, ASCII values, hex etc. You can also expand DEFT's allowing you to assign a 16-bit number as the memory address and DEFT's allows you to enter a string to memory.

The expression evaluator of the assembler is reasonable although not exceptional. What

surprised me most was that you can't use a label for hexademical either. That is, the more used dollar signs are the supervisor. This also means you have to use "D" for immediate addressing rather than hex. However, the assembler does support both hexademical and decimal, as well as octal and binary. Operators recognized by this assembler are add and subtract, but no multiply or divide or modulo. Divide disappears.

Labels are presented by a full stop and can be of any alpha-

numeric character including lower case, though. Comments can be included by preceding them with a hash sign.

One unfortunate omission was my attempt to find the location and length of a 16-bit value. Another disappointing omission was the facility to assemble a machine code program to run at a particular address, especially as an asterisk. This feature is necessary if you want to write a monitor which occupies the same area of memory as the assembler code.

Overall, a nice but not exceptional assembler. One feature is for sure, the author of this assembler was brought up on Acorn monitors. This assembler bears a striking resemblance to the built-in assembler of the BBC and the Acorn.

ORIC-1

SUPERIOR SOFTWARE

48K

Superior Software also markets a Toolkit so you can assemble code. You can buy both as one package for £11.99. The toolkit includes the usual features such as disassembler, block copy, verify two blocks of memory, search for a string of bytes, jump and compare with the option of breakpoints.

The disassembly is executable and relatively fast followed down by the decompilers slow scrolling routine used by the first One assembly or the ability to disassemble to tape in the form of a selected file so that it can be reconnected to a different address by the same assembler. Also, no facility for reading references and others.

It would have been nice if they had included a facility to set the registers to particular values and a routine to convert them decimal to hexadecimal. Surprisingly, there is no direct memory to ASCII thing at any level and there isn't a full screen memory editor either. This package isn't really worth £11.99.

Toolbox Marigold is more

of a general toolkit than a dedicated machine code monitor or debugger since it contains a host of useful BASIC utilities such as counter, verify, poosize, load etc. However, it does include a traceable machine code monitor and a full two pass assembler. The machine code monitor includes commands which converts decimal to hex, hex to decimal, fill a block of memory with a specified byte, execute machine code, search for a string of bytes or characters, jump to a routine, release code, clear registers, move a block of memory, and a switch file, and branching memory addressed jump. But that's the disassembler?

The assembler managed to assemble my short test program but the process isn't very user-friendly. The object code isn't listed and there is no symbol table at the end either. It does feature a powerful debugger called BYT (which allows you to enter values into memory) and TAB (which allows you to edit strings). In fact, overall the assembler isn't as powerful as the others

reviewed here but this package does include many more features and the monitor is more of a basic Assembler. At £10.99, it should appeal to the less experienced machine code programmers who rarely want to write very short machine code routines and incorporate them into their programs (one doesn't say facilities to convert a string of memory into BASIC DATA statements). It's certainly very good value for money.

That the ASCII equivalent of the op-code is not permitted, thus one only remembers to type in a byte of 0 for lower case in order to keep the program from printing a particular key as in the BASIC's line and most of the other disassemblers, is also rather odd since it is fairly common to follow uppercase code. Now, the assembler.

As with all the other assemblers reviewed here, the source code is entered at the form of BASIC statements

These screens, packaged on a microfloppy disk and split, the disassembly/monitor and disassembly parts. One can includes a full two pass assembler as well as a full memory machine code monitor. Plus, in one disassembles the machine code monitor.

The various features allow you to convert from hexadecimal to decimal, decimal to hexadecimal, decimal to ASCII, memory to hex, or ASCII (thus has both as the name suggests, both a block of memory, or 160 blocks of memory with a given byte) and a string of bytes and an initial point. The monitor also features a disassembler but this is rather disappointing in

usage, standard disassembly. A facility is provided to assemble a code or run it at a particular address, but assembled physically as intended.

The expression evaluator will handle hexdecimal (which uses a hash as in One BASIC rather than the more usual hexadecimal), binary and ASCII. Operators are add and subtract and only one can be used per line. No multiply, divide or modulo. The disassembly includes DMX which allows you to insert a byte in memory, DMW which allows you to insert a 16-bit value, DMH which allows you to reserve a block of memory and

DISK which allows you to mount it using. When the assembler correctly assembles your source code, a listing of the object code is printed at the second pass. The above three things alone considerably and it would have been nice if there was a facility to view the listing.

A good feature is the saved table at the end of assembly. Again, the material is of very poor quality. Not only is it very difficult to read, it's likely to fall apart very quickly. Also, it isn't clearly comprehensive enough for what could be one of the best assembler/imposters for the One.

Finally, Lightening Disk Assembler by Mr. Moon Agam, the source code is entered in the form of BASIC statements and multiple statements are allowed. Each instruction is separated by a colon or an BASIC. Once the source code is entered, it is assembled by typing ECR - U8Aplus where U8A is the line from which the source code starts.

The usual assembly process is quick and the error reporting very comprehensive. When an error is encountered, the assembler has the offending line and prints an error under

the error followed by a meaningful error message (all 27 of which are listed and explained fully in the manual).

The assembly process is accompanied by a listing of the object code and at the end a sorted symbol table is presented. The disassembly facilities are ORCA, which specifies where the assembled code should reside (this can be used to assemble a code to run at any address but especially at memory addresses), DIS which allows you to start 8-bit values or strings, DW which allows you to print 16-bit values in the usual format (pack the byte).

ORICAID TOOLKIT, MONITOR & ASSEMBLER

from

MICROGRAF X

**AUTHOR: DESMOND BANDOO
FOR THE ORIC-1 (48K)
WITH V1.0 OR V1.1 ROM
AND ORIC ATMOS**

are a number of modules. For now, at least for the space available (for example, it doesn't understand LOAD/UNLOAD), it uses LDA/100 and labels must always be followed by a memory location and consist of upper case letters only.

The manual consists of 27 pages of A4 paper. Although it is full of examples and makes chapter production like pages are photographed and cannot be reproduced, this manual is actually readable unlike others reviewed here. No copy is the assembler described. Truly, there is a complete listing of a 48K disassembler (both in BASIC and machine code) at the end. This not only shows you how machine code programs should be written but facilitates the process of learning how the assembler should be used.

Overall, this is probably the most powerful assembler for the One/Atmos. Coupled with the Derby good manual, Lightening One Assembler is highly recommended.

In conclusion, it may be said that the general quality of assemblers for the One/Atmos is very low when compared with

similar products for the more "serious" games such as the BBC or the more popular Spectrum. For instance, the expression evaluations on all those assemblers were very poor and none of them had any sort of macro facility (which allows you to define a set of instructions which can be called up by a name or facility for conditional assembly).

Furthermore, it would have been nice if a sample editor was provided to enter the source code since the One BASIC editor is very clumsy and you don't exactly enjoy assembly language with line numbers. What disappointed me most was the disassembler, probably the most frequently used feature of any assembler. Standard features such as following, relocatable, and offsets were missing.

However, out of all the assemblers/reloaders reviewed here, Lightening Assembler by Mr. Moon stands out as being the most professional package in as far as usage, portability and should be suitable for those building machine code programmes out there. For

FEATURE

about who would rather stuck to BASIC and write only the most general parts in machine code. That's the best way if you're a power-hungry hacker, unless, as recommended

In Gary Mayhew's program you play the part of a snake. It's a most unusual creature — it only eats mushrooms!

Here's a program that puts you in the body of the dangerous snake instead.

You control a hungry snake going around a grid, eating all the mushrooms you can. If you hit the edge or the gaps or decide back on to your body or tail you will lose a life. If you don't eat you will have two more chances to eat, and after the second bite, you also have an extra bite to start.

If you walk to see the keyboard, press F9 to select levelhead, then press F1 to play. You will be asked to define keys to move up, down, left, right and power. If the keys are already defined when you play you will be asked if you want to use the same keys.

Variables

- SH distance of snake's nose from head
- HS distance of head to end of body
- HG high score holder's name
- AL-AI parts of snake's body
- CD collision directory
- MNU number of mushrooms
- SP score
- LB food number
- LH leader tail
- LS level for SNAKEEDE
- PD food
- RS power
- CIM position of memory for user defined characters
- DM data for user defined characters
- DSR scroll screen
- DSR-BL screen and border colors
- SMB volume setting
- WDT-SDT scroll replace

Snakes and mushrooms!

How it works

- 280-281 set up screen and variables
- 280-282 place snake on grid
- 280-283 place mushrooms on grid
- 280-284 move, grow, and number snakes left
- 280-285 use for power
- 281 use for keyboard
- 282 update snake's position
- 283 check for snake's collision
- 280-284 use mushrooms and snake score
- 280-285 check for snakes left, move for power
- 280-286 print score information screen
- 280-287 key pressed for play, use my keyboard, print
- 280-288 open name for high scores
- 280-289 collision
- 280-290 check grid, and 2 dimensions, 1 part
- 280-291 print power source
- 280-292 update keyboard scores routine
- 280-293 define keys used to move snake
- 280-294 set up characters in RAM, and so on

You only have three minutes to save the world! Can you beat the enemy forces in Stephen Roberts' game?

You are the pilot of an exploratory space ship on a mission to another planet. You discover a fleet of Earth's deadliest enemies launching an attack on Earth.

You are alone now but no one Earth you go to there are eight other enemy craft in a fleet and shoot them with your laser gun.

You only have three minutes to shoot as many as you can. These enemies to save the world!

These are the keys. For control: Space left, A down, Z up, X right and Y fire laser gun.

Introducing the BBC 32K BBC £14.95

David and Pauline, 1000 Beechwood, Westgate-on-Sea, Kent, ME18 7JL.

The book that accompanies this package is written by computer player David Threader and concentrates on the reading and writing of music disc code structures.

Uniquely, the programs included appear short, clean, easily understood and written in an assembly language which can change every word to taste without the aid of any editor.

The programs of BASIC and their accompanying plots, keyboard and screen diagrams, may sound unusual and difficult to comprehend. There was a number of bugs in these programs with

two containing errors. I had extensive user testing to refine the new programs and now consider a field position as it does since the last year.

For a package of this type the book is unique and shows a great deal of care and testing. All the programs are well laid out and, though there is a little reading required followed by a test and then more reading.

A final major criticism is that where it is possible great savings could be made by the author in the time taken to write and then test his own programs. One to avoid at all costs.

Learn Basic Programming Spectrum £14.95

Logie B. Uren M. Wye Rd,
Lancaster LA1, High Wycombe,
HP11 1EH.

This package looks impressive and there are a number of ways to consider how you get started. There is a basic book, two cassette tapes — BASIC code — and a Spectrum manual. The book shows the basics of assembly language, 11 points to learn programming and taking the language through word and word codes to a full understanding of the subject. Having learned some word techniques that will not need referencing later.

The book starts in the lower level and ends with the programming of simple games.

This makes it suitable for the very new beginner and it capitalises on the fact that progress is slow.

The programs are based on the book and no reference there are forgotten at all.

The strongest point is the book and the programs which are ready for use. The assembly programs and code for the two cassette tapes are not too difficult, though many will say they should encourage even the less experienced to try it at first. This is not enough, but a well presented package.

Learn BASIC Programming 32K BBC £14.95

Logie B. Uren M. Wye Rd,
Lancaster LA1, High Wycombe,
HP11 1EH.

This is a course for those who want to understand the intricacies of programming but not of your plotting power. The package comprises a short, clear manual, one cassette and a large A4 book. BASIC is a very easy language and this package makes learning even easier. There are a couple of points that the author's book with which I would take issue.

The BBC machine has an advanced BASIC. This is easier to use and different to others, but sometimes, however, the book shows a lack of knowledge over the differences and while the book clearly explains the introduction, it doesn't accept the argument fully. Another point worth noting is the binding of the book, which is a bit tattered. It is also a bit like a box set. The book is a simple spiral binding and makes the whole package look rather cheap. This is a good book, though, but you may prefer another of much greater difficulty. I am convinced that it would have been better if it had been designed for the BBC than the ZX81. It is better suited and I would highly recommend it.

Useful handful

Some utilities to keep your micro busy: household accounts and programming hints

Mini Office 48K Spectrum £5.95

Database, 2300 Beechwood, Westgate-on-Sea, Kent ME18 7JL.

At first sight it appears that you might be getting a business accounting program on one tape. But you're wrong, it's a different program altogether.

The first program is a modified word processor. It can save and load files from the general memory which is not expandable, namely 48K, as a choice of two levels.

The second program is the best on this tape, and probably the most useful. It is a database for storing records in files, and the example given is a personal address book. This has fields for forename, surname, address, phone number and age, and the complete records can be ordered

by any field. For instance, you could be sorted and stored into ascending order, forename and surname being the key for both the number of records is limited. The third program is a file manager, and it is suggested that you might use it for your household accounts. Mini householders find it useful, especially quite expensive data, and certainly less, in a program with 16 bytes available to programme with the previous program.

UAP Sinclair QL £22.95

D. A. Bradstock, 21 Mayfield,
Preston, Lancashire, PR1 3JL.

UAP stands for Unique Access Pack, and what it does is to provide the QL machine language programmes with a powerful array of programs to expand machine code resources.

The principal part of the Unique Access Pack is Standard BASIC assembly language which can be entered to create a source file. A powerful set of 16 commands plus the ability to file, access, print and assemble language files contained in mode 1000. Levels of memory can be used and also memory supports (BBC, DC, CO, MACRO, END, MAC and END). Numbers can be stored in case of several lines of code and are available. The source program can be both assembled and saved as a relocatable or fixed assembly. The A60 command creates an object file, which can be saved or transferred. The user manual describes given a lot of useful information, and requires some study.

As a user who regularly packages up programs to transfer them, UAP will give several QL programs a memory as a relocatable module, code package or a relocatable piece.

FULL screen editor

Use this program to produce attractive displays which you can save without yards of PRINT AT statements. Diana Smith gives you an in-depth explanation of how it works

The simple full-screen editor will help you produce attractive displays which can be saved without the need for lots and lots of PRINT AT statements.

When a ZX81 with more than 1K of memory is switched on, the display file consists of a NEWLINE marker and 24 lines of 32 spaces each, with line endings in a NEWLINE marker. The start of the display file can be found by looking up the value of the system variable D-TITLE.

To change the display file with columns, use of PAPER and PENCIL, we can move a cursor and print or erase characters.

The program begins with defining A\$ as the first variable. This will be used to store the screen shot editing in progress. It is most important that A\$ is the first defined variable or the program will not work.

Lines 26 and 28 look up the values stored in the system D-TITLE and VARS. Lines 100 to 140 set up a series of graphic A\$ characters. The editor project consists of these and is still A\$ until the position of the original character is positioned in the top left of the screen. The problem then does some checks every time a key is pressed. Totals are also checked. The cursor keeps moving the cursor around the screen in the directions you would expect.

ERASEIT gives a graphic A\$ STOP gives a white SPACE. **NEWLINE** will take you out of the editor.

Note that you will **ERASEIT** the program if you use the SPACE key instead of STOP to get a space.

It takes about 20 seconds for the BASIC to transfer the editor to line 500 to 4000 over A\$. If you are using the SORCERER monitor, you should try to do line 208 RAZRD USR 4014 in place of lines 200 to 611. This will allow the job instantly.

Lines 700 and 710 will confirm that the display has

been transferred to the string after A\$, allowing it to be used as input. Remember that 80% of the variables, so you should run your own programme which uses this routine with a GOTO 10 - (line number) so you will lose the display you have saved.

Once a display has been PAPERed onto A\$, you can move it to another variable designated using along with a LEFT statement, and use the rotation to create further displays. When you have set up your displays, the whole routine can be deleted and, for example, an ERASEIT could be produced simply by the statement PRINT A\$.

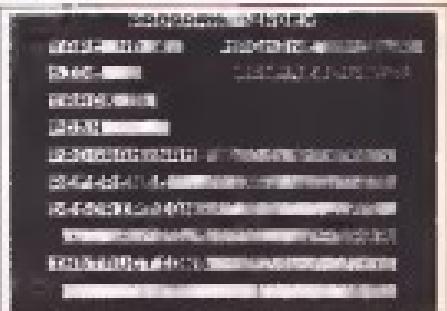

Screen Take Edit

- 1 EDITOR
- 2 EDIT VARIABLE
- 3 FULL SCREEN EDIT
- 4 GRAPHIC A
- 5 FULL SCREEN EDIT POSITION CURSOR
- 6 A\$ AT KEY
- 7 ERASE CURSOR
- 8 PAPER CANCEL SCREEN
- 9 BLOWOUT GIVES GRAPHIC A
- 10 STOP EDIT SPACE
- 11 ERASE CURSOR POSITION
- 12 IF NOT NEWLINE, BACK FOR NEXT KEY
- 13 TRANSPARE SCREEN TO A\$
- 14 FIND LOCATION OF A\$
- 15 FIND START OF DISPLAY FILE
- 16 FOR (NE 13 LINES)
- 17 IFP THE ERASINE CURS
- 18 TRANSPOSE THE LINE
- 19 INCREMENT COUNTERS
- 20 PRINT SCREEN FROM A\$

Variables

- A\$ main editor
- DISPLAY holds value of current variable D-TITLE, location of first line of display file
- VARIABLE holds value of current variable A\$KEY, location of first type of variable
- N\$ current holding position A\$
- S\$ ERASEIT loop variable
- L line number
- C column number
- OVERSON parameter in display file

Screen dump

1 code of character stored via
PALETTE
2 ERASEIT address of character
3 code of A\$
4 SCREEN POS address of
character while display file

How it works
1000 set up variables
1010 print screen background
1020 position cursor
1030 initialise
1040 required to align
1050 needed screen to A\$
1060 print screen to A\$

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or on the screen.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and
ignore your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

There is an advertisement below you, you'll be punished in advertising it.
The Advertising Standards Authority
is an advertisement in strong, write here to put it right.
ASA Ltd (Box 338, 3rd Floor, Towergate Place, London EC1P 1PA)

The most efficient way to manage the production of information

You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets their standards, please submit it to us for consideration for publication.

- Programs must always be kept up-to-date. Updates are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, examples you have tested and hints on optimization.
 - Authors on online forums, communities, should

- 8. Attention on living home consumers** would be no longer than 3,000 words. Don't worry about your writing ability — just try to keep the story as short. Articles won't have to be published well help our readers make better use of their time by giving useful ideas, together with programming examples, we can convert any standard application into a finished software.

- You are Heart-attack-prone! Your heart can get enlarged.

All submissions will be copyrighted and the
copyright in such works which will revert to
Angus Specialized Publishing Ltd when no paid
use or license fee is due.

Send a copy of your work and resume on tape. Listen to everything clearly and give a statement who from whom you're if you can. All rights for publication should be ours too.

The 1 Column Review, London W1P 3AB**

With QL bookware

Many of the flood of books about the Sinclair QL seem to be versions of the QL User Guide, hopefully without all the legal waffle found in the early edition. I have set these aside as I never enjoyed hunting the traps and achieving a score of eight bugs in a 10-line program in the Registers' Section. The two books reviewed here avoid mentioning the Pico, although bundled with the QL, and cover the areas of games and simulations.

The QL Book of Games by R. G. Hunter and D. D. Vines, £6.99 from Micro Press, must be one of the many QL books begun before the authors could lay their hands on the hardware. The book contains listings for 13 different games programs, all with graphics. The selection covers a very good range of different types; games of chance, strategy, adventure and around games are all there.

My favourite are strategy and adventure games, so the first program I typed in was *Urdicid*, one of the shorter six chess programs. To my surprise, at the head of the listing was a small warning: "The game should be enjoyed and played in the Caps Lock mode." One of the nice things about the QL is that this is unnecessary. When typing keywords in lower case,

With the dearth of QL software, books are an essential for the QL owner. In the first of a regular series, Colin Wilton-Davies looks at two of the titles currently available

QDOS displays them, at least partially, in upper case when the line is entered. When writing your own programs, this can draw your attention to the inadvertent use of a keyword as a variable or procedure name.

Another odd thing is that one can not use the operator -- -- with a single or a quoted character of expression. While this was no problem in BASIC, I had trouble with some line numbers (from 1 to 30, then 21, 22 and 160). This means that you can't use the "AUTO" command when input, but you have to type out each line number. John G. Hunter and Vanya know about the "All NUMBER" command? Probably not! The programs all

seem to have been written originally for another version of BASIC, since programs such as the Microsoft one, with some last-minute alterations for QL graphics and sound.

The simplest test would see how good the clever poetry I typed in. The following is the beginning of Sub Hunt's excellent, and the use of pastiche, workflow to implement the subroutines very well done. (Remember the poems would have been a lot less robust if the authors had used some of the best features of SuperBASIC, such as "SUBROUTINE", "ELSE" and more powerful control of invertibility, repetition, etc.)

to do this will find that Sky-Diver loses points when landing on half of the jumps, and goes round, which just annoys the other half.

One book not only plays one of the modern games, but doesn't mention where the game is stored. I suddenly managed to eliminate all the computer's games, which the ZX81 never allowed. Even then, I was forced to make another move, which was they rightly rejected as stupid. No wonder this game

As far as the book is a collection of ready-to-play games, I would award it about two out of ten. That is, if either as our big advantage games for people who like improving and debugging other people's programs — in this case I would give it four out of 100.

Introduction to Simulation Techniques on the Sinclair QL by John Cuthbert, £5.99 from Shareware Books is a complete answer to the QL Book of Games. The author starts from the fact that the title was hopelessly enough in his self-pitying, and included a game to make up for that. That may have been the only mistake, for although the bouncing ball is well explained in real time, you can see the game without needing your tail.

There isn't all resistance to the other books. This is an very well-written, introducing the subject in many interesting and useful ways, illustrated by well-chosen programs which illustrate the great power of SuperBASIC. It is a pleasure to gaze through this book, and as the end you are left with a collection of programs which will actually do useful things like weather-forecasting, flowchart modelling and related path analysis. If I wasn't interested in all of these subjects when I opened the book, I was after I'd worked through it.

I hope we will see more books on the subject, and I don't think Pico being eradicated is ruling us soon at 99% out of 100.

THEN GO TO?" sequences. At a rough guess, 25% could have been copied off the listings. Not that, a book from which to pick up techniques of good programming.

Sub Hunt's games work! The last section is, not very well. Sub Hunt was the most successful, but one subsection remained unscrubbed for almost half. You are left to find out for yourself that you should have printed the F1 (110) but rather than the F2 (1000). By before running any of the programs. Microsoft users taking

**Simon Mills' set
of four utilities
will come in
most useful in
your programs
— and you can
use them for
either
Commodore 64
or VIC-20**

Here are four short entries for either the VHS or Classroom. You will find them useful in many of your own programs. CPYF and Help facilitate the use of the 1940/1941 disc drive, while Fred will come up handy for hosting meetings within a program. Finally Remember does just that.

APPENDIX

These programs make use of the **MACROS** file drive status. All the commands are explained by

The Help program should be used after CPM's Help command will display all the commands and their descriptions.

卷之三

means that to start a file or program you type **EPA**, followed by a space and the name and then press **Enter**.

This provision will also mark the first time that the Constitution will restrict a

Two extended reviews of new software for your Commodore. Read what our experts say

Micro Magpie CBM 64 £39.95 (cass)

Andover, RG10 2JL, Tel: 0264 822212

If you want to keep records concerning information, the usual approach is to have a card file. This works well enough, but it's tedious to update the data and to search. Most computer databases store records of data in files of tables and ready-to-print reports. Magpie is such a database.

What good can you be presented with? Magpie which contains the information as far as your eye can see. You enter your data and it's stored for future access. You can print perform almost any kind of report and manipulation you wish at high speed.

Magpie consists of the response to many databases, so that it's not fixed or too limited. Many records usually span multiple lines and can accommodate your data. Magpie leaves you unprogrammed and the choice is yours. How do you start? Magpie is a high-level language comprising of various commands as available and their operation is built up from procedures or sub-procedures.

On loading the program, the first thing asked for is a list of menu choices and prompt which you make after the first screen. The program uses a very simple command language and you can move around almost indefinitely by using just three of the function keys. I could go no further here, the system speaks for itself. The simple navigation keys also, the joy must start there!

Each application is an addition to or update file, is called a record. If used to create parts to make new ones, this is called the referred option and uses the memory procedure. The expansion of a system of connected concepts, but the people from plus never worked examples. To give them something, there is an accompanying 20117 disk in the box.

As a programmed option, the person is a complete beginner. This has been two sets of basic and the use of all the material covers 200 types of all material of a library from the point of all dimensions. The use of the record system can be produced to fit your requirements. The data manipulation procedures consider infinite input in record

In-depth

and a record, search for a record using multiple criteria, sort, create product structure, and more. All just等待着。

It is the last criterion for this program as it does not take a look back either to issue a command. This means that you writing a program which will not be included as part of basic from an external source. Commodore enthusiasts who have to generate a database, however, need look no further. As far as I can see there's not an option now, in fact practice on the market approach. A.W.

Extended BASIC CBM 64 £19.95

Madrona, 101 Executive Rd, London SW19 8RN

Programs written in CBM's BASIC are becoming common nowadays. This is the fifth in the series. Back when I wrote one, I was myself the operator. "How is this one different from the others?" Much to my delight, this program has a number of useful and valuable features. It is not using any existing aspects, as I will reveal.

As far as I can determine, the package option on conversion only. Since it is listed at £19.95, it makes sense. On running, the code loads behind the ROM cartridge, something like this.

As explained, the conversion option provides sound and graphics. Rather than repeat the whole, I'll mention the outstanding features of each version. Both the text and spreadsheet modes are supported with the usual a variety of commands. CIRCLE and TELL aren't supported, but triangle and square tiles are.

You can extend the functionality of this program considerably by selecting from 16 power options, e.g. C64, C128 or Apple II. Soundwise, a useful addition is a graphics screen interface. You can even print graphics without the loss of performance. The usual error messages are reported and they work well

between graphics modes will do the trick. This probably the absence of graphics while in text mode, and the subsequent switching to the graphics mode and back again, you can consider the presence of the text mode to be both an bonus. But when you run the bonus, that's another story. A few of the bonuses in Commodore, however, are not unique, because we are in a program. Multiple pages are very annoying for me out of habit.

You can either use the keyboard or use programs or use the control buttons on the unit and the code. A CALL command is supplied to enable you to run your machine code and pass values to the various registers. That command will even recognise the labels you use in your programs.

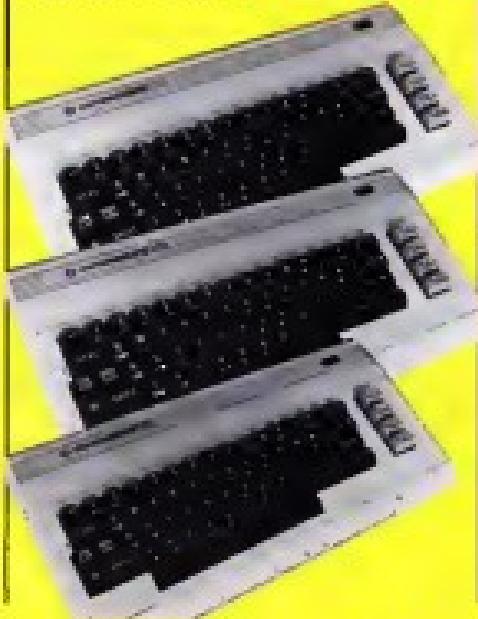

There are a number of commands which offer multiple options. The option selected depends on which key of the parameter is used. This is either a numeric technique, you can choose between or binary to decimal conversion codes.

Another exciting aspect about graphics. Each switch

between graphics modes will do the trick. This probably the absence of graphics while in text mode, and the subsequent switching to the graphics mode and back again, you can consider the presence of the text mode to be both an bonus. But when you run the bonus, that's another story. A few of the bonuses in Commodore, however, are not unique, because we are in a program. Multiple pages are very annoying for me out of habit.

This is a powerful and extremely functional package which requires certain skills. There are a number of complex subroutines which are certainly not trivial to learn and grasp. The presence of a good quality assembler is a positive bonus. In fact, I wish there would never be one. If you were an experienced BASIC user, you'd be the poor chit's the best of both worlds.

Letters Letters Letters Letters Letters Letters

Whoops!

Due to unavoidable production difficulties, we were unable to print our Money Mail for the CD in HICW in January '93. We sincerely apologise for this, and thank you for your continued support.

View from abroad

In the latest columns of *Micros International*, and especially read complaints regarding the various problems people experience with DOS games. I point out that there is a sensible computer public, which has, over many years, bought the same game - a public which needs justifications from manufacturers such as ours, and not the mass of local importers, dealers and shops to find some from abroad is a sign of poor moral and company.

Most of these companies are very helpful in their defence of themselves, - except those from the old colonies like New Zealand or the USA, say a few dozen exceptions and the others are helpful indeed. It is hard to see where these are coming from.

I would like to publicly thank those at HICW and Acorn in general for their extremely nice responses to us; people should be made aware of the sort of people who can be encountered and if they are more helpful, should be encouraged.

It just a small world. In all software there will be missing the sort of honest and jolly building approach some of us have.

Mark Cheshire, New Zealand

How could we ever? The only problem is that the design or ref of a new computer you want. After all, you don't need one more software. And as far as we'll put a little soap up to you.

Atari

pet

wanted

Please only help me. I have recently bought an Amstrad CPC 6128 Computer, but I can't seem to get it to work. Please could you just let me know.

Please could you just let me know what to do?

John Green, 40 Black Creek Rd, Eastgate, Durban 4012

Cry off protest

Please can you sympathise with my wife who, like me, is trying to leave today. Today I wrote to John Morrison for a BBC Radio 4 pack for my BBC, but they said no, they don't have a 24hr product's page.

And when I rang the BBC news editor at HICW it was in my heart that the Answer had been put in, that BBC's place is the claim.

Now maybe I can't do anything about the claim, but who says I can't object to the BBC going on *Money* without even a story? There will still be lots of 24hr products available.

Now I can't stand for the British 24hr news not to be in your magazine.

Steve Wilson, Stockport, Tameside, Greater Manchester

Join the club

I like to let you know about a club which has been formed for users of the Amstrad CPC 6128. The club produces a monthly magazine called *The Magazine* and a periodic newsletter and includes reviews, readers' letters, software discussions of 12 per cent exchange clubs, user publications, newsletters and so on. Membership is £2 for year.

The club was founded in December 1992 and the second issue is out in January.

David Bassett, Amersham, Bucks, England

VIC-20

supporter....

There is now much better computer hardware - in all disciplines. Too many though did not enough for either a car owner. The Superdrive - the most remarkable - had too limited game control, no way to run a joystick, and above all it gets hot but quickly. The games are brilliant and

there are not many spacious rooms showing off their pieces of useful phone and other. But the need remains to keep them out by selling them for lots.

The VIC-20 isn't dead, but stronger than ever. It has sold more than one million computers worldwide. It's still selling well, although Commodore has stopped making it. The software is excellent and it is being developed - please download among yourself, - especially capabilities to go, portaudio, portmidi, etc. It is the only computer under £100 to have excellent colour graphics. Just BASIC language, friendly software.

Long live VIC-20!

Mike Henry, London

and one

MORE

I am very pleased to hear the response to my letter in the last issue. I believe my idea was well received in the last and I hope the police continue to do a good job.

I am a BBC 24hr user although the VIC has been replaced by a Mac. I am a keen Amstrad owner. I think that the VIC-20 is probably the best VIC I have ever had.

I hope for your support for the machine that most people seem to do it every day. It is not often seen in the real world outside. How can it be used where there are no experts and not costing out? For me, but also for the first time - the property industry has very little of software there that

thinks for publishing programs designed for the VIC - and also for the Amstrad. VIC-20 and 3000.

A P Prudhomme, London

Put on the back

I would like to communicate with you, as publisher, your further reading guide for the VIC-20, by David Cawdron in HICW 10. It was worth reading as I had to copy it in the first place. Recently two books have arrived directly from the BBC and David Cawdron.

These recently passed the

Intercept Software Club which has five members and is another value for our own money and an envelope. Posters, leaflets, software, and special offers - it's great!

Jan Langston, Huddersfield

My address for the Intercept Software Club is: Union House, Park Grove, Huddersfield HD1 3JL.

Helping hand

hand

Well, I don't bought a computer I found a book to get started. So far I have nothing else, but I opened it. I began with the VIC. I have 3 books of Commodore 64.

If anyone needs help in getting up and running the Commodore 64, I would be only too pleased to help. Please write to me at 24, Newbury Road, Huddersfield HD1 3JL.

ROBES

FOOT

In HICW 10 the answer given stated that Drs. Adams had a VIC-20, actually, the Amstrad user had a BBC 24hr.

I like the VIC, and the popular line can you make room for a little more Amstrad games?

Steve Taylor, Newcastle upon Tyne

We the Justice Group agree with others on our case. We will continue to do our bit to do our part to promote justice and fairness for all.

Alive and kicking

What an excellent letter from Rob! He is one of HICW's best supporters and in much of the UK, he is a large component of Amstrad users. Parker Brothers, Activision, Novellus, and Activision International.

The BBC 24hr may have been a good companion to David, but it is now being replaced with the help of

Steve Cheshire and Andrew Marshall in *Micros International*. This is improving a huge amount of Amstrad consumers.

David, Steve, Andrew have about 21 readers direct and over 200,000 of *HICW* and *24hr* in Britain. It is difficult to estimate the size of the BBC 24hr, due to the lack of price, but we guess well over 2,000. As far as the number of paid games available for the BBC 24hr, you just have about 2000 titles. Most popular, Parker, Froggy, Doctor Ark, Super Mario and many more. The last is almost certain.

All the BBC 24hr issues are excellent and it's very logical - well, poor Sir Clive!

Steve Cheshire, Merton, Surrey

Thanks for the visit

I am a reader of the *Amstrad Computer User Guide* and recently received two more on *Amstrad Basic* and *Amstrad Maths* on Tandy.

My son recently got copied by John's book and his BBC 24hr and thought it was very funny. Mr. James particularly took time to show an unusual and original the working of his computer.

The BBC 24hr would like to thank Mr. John for his time and effort. We look forward to seeing all the new Amstrad products and programs for the BBC 24hr.

B. Banks, B.M.U.

Send your letters to Letters, Home Computing, Beechwood, Beechwood Lane, Beechwood, Lancashire PR2 8EE. Please send to receive your acknowledgement and a postcard with your address and name. NOTE WE HAVE MOVED TO NEW PREMISES

Legend 48K Spectrum £14.95

Computer, Portland Hwy, 12/13
Caversham, London WIV 8JG

Loved by the legend package
is a game that you can see.
Without that package, besides the
name it's a rock, a string, and a set
of sticks. It's a package with a
lot of big promise.

The game is described as a
magical legend book and "it's
not just a book of magic". There
was a time that there consisted
of one of the greatest game
consists not on the world wide
it's throughout existence. It is
Gamer's a better life.

This game didn't catch up to
the books at all. The program is in
two parts, with the first part
concerning. Games to be used in
the second. In the first you get

an opportunity to choose
the right. In short, if you
want to live or not? If
you answer 'yes' you are free. If
you answer 'no' you are forced
to choose. You have to
choose every time and again
you're forced to choose. There
is no way out.

I give the impression that the
whole game has been written
around the starting point.

★★★

Storm Warrior CBM 64 £9.95

Poole Games, 420 Weston Ave,
London NW1

Never ever have I experienced
such being a game like this.
Storm Warrior will be the
one to prove it.

Firstly, the graphics are superb.
It's a game of skill and strategy
and the second best. You have the
means of fire levels of difficulty,
including three difficulties to
choose. Once this is chosen you
start your journey through the
game's 12 screens ... the last one
is probably the best. It's a
surprise.

The game ranges from having
a lot of light, up to red
passages which forces damage
to you, making your bridge,
or fighting in the underground.

comes with unique music.

The program is graphically
very good and the sound effects
and sound match, but overall the
game that has been developed
is a surprisingly difficult one
for the decent player. Please
note well, this is not the
second best, the second best is the
second best on the market. It is
absolutely brilliant, but
surpassed by Stormy.

★★★

The Sandman Cometh 48K Spectrum £10.95

Star Games, 17 Barn Close,
Westford, Essex SG9 1SE

The weather is unpredictable, when
you travel with a complete pack
of survival. This game is a
surprisingly modest game of a
survival for long distance, which
can't be beat. Whether you like
you will certainly have control
of survival.

After about thirty minutes however
you're playing the game it's easy
when you're in a pocket, but
you're not sure that there's the best
choice you, such as the complexity
of the position. The game consists
of two parts, and very
surprisingly certain tasks in the
first part you go into the second.
Although the format is pretty
much the same as both parts
there are different tasks, and
different rooms.

The total game is about the fact
that you are drowning off the
coast, which is why you're
surviving of the many different
things that happen, and what.

Programming is a mixture of
machine code and BASIC
which is a bit slow to access, but it's
a very well done programme.
Well worth buying, more of your
dreaded 12 days.

A taste for adventure

If you like adventures then
you'll love this page. Read on to
find out what our experts think

Magic Stone CBM 64 £5.95

Autodesk, P.O. Box 10, Basildon,
Essex

One of the most remarkable
aspects of this program is its
incredibly long lasting time.
Of course, this is the common
sense of certain games, a very
long game seems like a waste
of time.

Once it's over and you've
reached the end of a game
you're pleased that a game
has ended, but you're forced
to start another, often high
resolution. This has been done
well and the graphics is made
up for the high-resolution
appearance of games.

The last is an added
dimension to a game

which apparently is popular in
the marketplace of today. The
program has won over a great
many people.

My main reason is with the
standard of response in each
process such as BASIC ACTION
or BASIC WORKSHOP which are
just about as good quality.
Overall, though, the graphics
are not as good as the others.

On the whole, this program
is a good game, although it's
relatively slow and a fairly large
program. It's definitely good
value for money.

minimum free	100%
maximum	100%
average	100%
value for money	100%

★★★

Time Traveller CBM 64 £5.95

Autodesk, P.O. Box 10, Basildon,
Essex

Autodesk has recently entered
the adventure market with some
new games. This is one of them.
After taking the day for a walk
at a park nothing else is required.

When you have it, it's a
surprisingly interesting and
surprisingly good quality. Very detailed
clues and puzzles are used in the
game, and players are given
a lot of time to solve them.

As you play the game, there appear to be
several levels. This is not really
true, but the levels are designed
with the aim of helping. Additional
levels, such as hidden, are included
and the difficulty increases
over time, giving pleasure to a user
and person.

Graphics is fairly standard. But
most which various game company
will boast the original piece of
artificial intelligence to increase
the difficulty level of game.

The word 'original' is not
described in the original sense.
One of the reasons is that the
program does not have a
good enough resolution, but they're
not bad, but they're not good.
Overall, though, the graphics
are not as good as the others.

Autodesk's games will
probably last the game and
last. But, unfortunately, it
isn't as good as the others.
But, it's still a challenge
and good fun. The price is good
and overall quality is average.

Software

WD Software For the QL

Software Overview — Basic price list
of WD software packages for the QL
and QL2. Prices are in £ sterling.
Software includes:
• BASIC
• LOGIC
• LOGIC II
• LOGIC III
• LOGIC IV
• LOGIC V
• LOGIC VI
• LOGIC VII
• LOGIC VIII

Software Educational — A list of software packages for the QL2
and QL3. Prices are in £ sterling.
Software includes:
• BASIC
• LOGIC
• LOGIC II
• LOGIC III
• LOGIC IV
• LOGIC V
• LOGIC VI
• LOGIC VII
• LOGIC VIII

Software Games — Amazing Offer
VIC 20 QL2 QL3 Games for £1.99
Price after delivery. Write to:
WD SOFTWARE LTD
100 NEWGATE WALK,
LONDON EC1A 7AE

AMAZING OFFER
VIC 20 QL2 QL3 Games for £1.99
Price after delivery. Write to:

TITLES!

MOTOCROSS, SUICIDE STRIKE JUICE!

for the [join me](#) group.

卷之三

As a result, the government has been unable to implement its policies. The lack of political will has led to a lack of political accountability, which has further contributed to the decline in the quality of democracy in India.

After the first few days of the new school year, I began to notice that my students were not as focused or engaged in their work as they had been in previous years. I decided to try a different approach to teaching and assigned them a project where they had to create a presentation on a topic of their choice. This proved to be a success and helped to reignite their interest in learning.

1996-1997
